Ex. 5 AC/DP

If we need to have ORD run samples for us, I would suggest we request they run the whole suite that they can detect rather than just GenX.

Cindy and I are talking tomorrow morning about this. It would be a good idea for Cindy, Roger and I to talk with Andrew or his lab director before we get too far down the road on this.

Cecil –

I rec'd a call from Andy Gillespie Assoc Director ORD at RTP.

He would like to give us a heads- up ONLY....to ensure a more informed decision making on our part – re our letter to

- He and his lab worked on the NC Chemours and the state's requests for sampling
- This is also the same lab that worked on the Ohio State Study coming out in a month or two.

When they worked with Chemours NC, the state originally requested sampling for GenX ONLY.

However, as sampling was done, they learned there were more chemicals (other PFAS chemicals) detected. As a result, the State had to go back and change the request.

Andy wanted to ensure that the region makes an informed request – he said we could request they target more broadly or ask them to do the analysis in a different way that would capture 5-6 other chemicals.

He or his director would be willing to talk with whomever – if someone from the region wanted to have a more thorough discussion.

I was thinking of asking Roger Reinhart to call them – but I'm leaving this up to you.

Hi Joan, nice chatting with you earlier.

FYI I am attaching a bit of background – one of the presentations from our work last summer, and one of the reports that we provided to NC DEQ to inform their decisionmaking.

Ex. 5 Deliberative Process (DP)

Tim Buckley (copied on this email) can provide more details if there is interest, just let us know.

Best regards, Andy

Andrew J. R. Gillespie, Ph. D.
Associate Director
